Abstract

Australian Aquatic Biological is surveying the whole of Australia primarily for Freshwater Crayfish with the aim of increasing the knowledge base on our crayfish species. Over \$1million will be expended on this project (Australian Crayfish Project) but as a by catch we have been collecting large numbers of other crustaceans, fish and molluscs, etc. This presents a huge opportunity to increase the knowledge base on all our species as we are surveying huge numbers of areas never before surveyed.

As a consequence the Australian Aquatic Biodiversity Survey project was conceived. We are currently updating all our permits to include all species in every area of every State. As you can imagine this has never been done before and creates quite a dilemma for most State Governments.

Its early days yet but in another 5 to 10 years we should have amassed a valuable collection that will do much to increase the knowledge base on all our aquatic species..
