

Australian Aquatic Biological Pty Limited

A.C.N. 127 431 118

Current Status 2012

Biological surveys of Victoria are ongoing.

Currently a number of new *Euastacus*, *Cherax* and *Gramastacus* species have been discovered in Victoria as well as a large number of unidentified *Engaeus* species. Some species descriptions are underway with many more in preparation. This book is on hold till most of the new species descriptions are published.

Project: 100027

The Field Guide to the Freshwater Crayfish of Victoria Australia

Publication

This is a larger detailed full colour guide to the 39 plus different species of freshwater crayfish found in Victoria. This book is for the serious scientist, it explains in detail how to find and identify each species in Vic and how to distinguish between them. Identification keys and shortcuts are given for all species. It is A4 size full colour, hard covered 256 page book that offers information on habitat, activities, description, conservation status, distribution, morphological features and how to distinguish between similar species. Full colour photographs of every species will allow all enthusiasts and researchers a better opportunity to identify the various species found in Victoria. This book is currently in planning only. No publication date has been set as yet

256 pages Full Colour, A4 hard cover.,
