***Euastacus madae* aspects of biology, ecology, distribution and conservation**

Robert B McCormack (rob@aabio.com.au)

Paul Van der Werf (paul.vanderwerf@gmail.com)

Euastacus madae is the smallest of all the *Euastacus* species and one of the most elusive. Ongoing biological surveys continue to gather very limited information on this species. The huge lack of information on this species is informative in itself however with each expedition we learn a little more on the species and over time we expect to answer the basic biological questions on this amazing species.
