The Freshwater Crayfish of the Islands of Australia

Publication

This is a small 150 page full colour guide to all the different species of freshwater crayfish (plus some shrimp/crabs) found on all the Islands of Australia. As part of the Australian Crayfish Project all the Islands of Australia are being biologically surveyed. These Islands represent a unique set of habitat areas with magnificent scenery and exotic locations. Full colour pictures of all the species in their natural habitat creates an extremely interesting publication. This book is currently in draft form with completion and publication expected in December 2015. Australia has a huge number of large Islands so it will take a massive effort to biologically survey them all for freshwater crayfish.
